

SEDA COLLEGE WA

COMMUNITY WORKDAYS

Is your school, organisation, or community group in need of construction or maintenance support?

Our Year 11 & 12 students in our Construction and Trade Program are eager to offer their skills and lend a helping hand through our Community Workdays initiative.

SEDA College WA students gain valuable experience by completing real-world construction projects while supporting local community organisations.

What are Community Workdays?

Community Workdays involve hands-on construction and maintenance projects. We work with a variety of community organisations, including schools, disability services, men's sheds, wildlife parks, farms, and more! From fixing damaged paving to constructing small structures like gazebos, our students can take on a variety of tasks.

What experience/qualifications do SEDA students have?

As part of their Materials Design & Technology – Wood and Building & Construction WACE curriculum, our students are equipped with the practical

knowledge to assist with tasks like:

- › Fixing paving
- › Building small structures (gazebos, patios)
- › General maintenance
- › Fencing
- › Reticulation
- › Mulching
- › Limestone work

How can we help your organisation?

If your organisation has a project in mind, simply provide a plan and cover the materials, and we'll bring the workforce! Our students are passionate about learning and making a meaningful contribution to the community.

How do I request a Community Workday?

Please email us at community@seda.wa.edu.au, and we'll do our best to accommodate your needs. We value our community connections and look forward to helping with your next project!
